

## DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 21.98 million with more than 775,000 deaths.

The total number of cases in the U.S. increased from 5,422,242 as reported on Tuesday 8/18/2020 to 5,460,429 reported today. The number of deaths in the U.S. increased from 169,870 to 171,012.

The Centers for Disease Control and Prevention (CDC) released today their August 19th Morbidity and Mortality Weekly Report (MMWR). It is already known that American Indian and Alaska Native (AI/AN) persons appear to be disproportionately affected by the COVID-19 pandemic; however, limited data are available to quantify the disparity in COVID-19 incidence, severity, and outcomes among AI/AN persons compared with those among other racial/ethnic groups. This report shows that in 23 states with adequate race/ethnicity data, the cumulative incidence of laboratory-confirmed COVID-19 among AI/AN persons was 3.5 times that among non-Hispanic white persons. A large percentage of missing data precluded analysis of some characteristics and outcomes. To read the full report, visit [here](#).

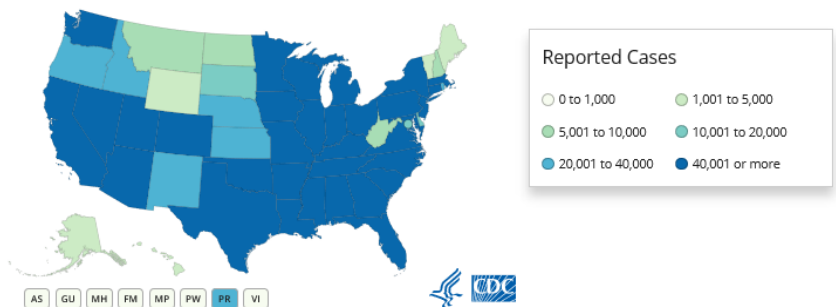

According to an article by ABC News, the Navajo community suffered one of the highest COVID-19 infection rates per capita in the country just three months ago, but with the implementation of strict public health measures such as curfews and mandatory mask-wearing, Navajo Nation has curbed the spread of coronavirus. The latest figures from the Navajo Department of Health, in coordination with the Navajo Epidemiology Center and the Navajo Area Indian Health Service, reported 19 new COVID-19 positive cases, 6,893 recoveries and no recent deaths, according to a press release from the office of the President and Vice President of Navajo Nation. Although COVID-19 cases in the Navajo community are on the decline, precautions are still being taken to ensure that a resurgence does not occur in the next few months. To read the full article, visit: <https://www.msn.com/en-us/news/us/navajo-nation-turns-the-corner-on-coronavirus/ar-BB17UnXW>.

## UNITED STATES

### COVID-19: U.S. at a Glance\*

- Total cases: 5,460,429
- Total deaths: 171,012
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or
- meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or
- meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

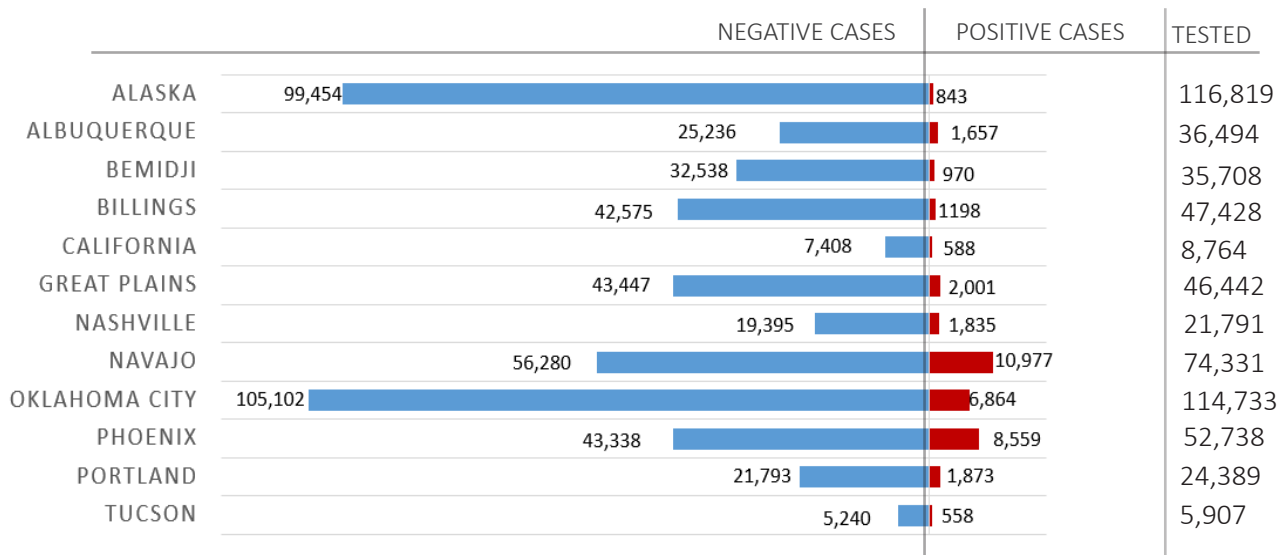

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

### National Laboratory Testing Data

- Total tests reported: 74,830,464
- Positive tests reported: 6,633,163
- Percent of positive tests: 9%

# CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #112 AUGUST 19, 2020

\*as of 11:59PM EST August 17, 2020

## CALIFORNIA

As of August 18, 2020, there were a total of 638,831 positive cases and 11,523 deaths in California.

Ages of all confirmed positive cases:

- Age 0-17: 63,118 cases
- Age 18-49: 384,524 cases
- Age 50-64: 121,521 cases
- Age 65 and older: 68,806 cases
- Unknown/Missing: 862 cases

Gender of all confirmed positive cases:

- Female: 321,189 cases
- Male: 310,752 cases
- Unknown: 6,890 cases

Lab tests reported statewide: 10,140,683

Twenty-five public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Butte, Contra Costa, Fresno, Humboldt, Imperial, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.

## CONFIRMED CASES AND DEATHS BY COUNTY

CURRENT AS OF August 19, 2020

### Counties with most reported cases

|                |         |
|----------------|---------|
| Los Angeles    | 224,218 |
| Riverside      | 48,447  |
| Orange         | 43,659  |
| San Bernardino | 42,827  |
| San Diego      | 35,164  |

### Counties with most reported deaths

|                |       |
|----------------|-------|
| Los Angeles    | 5,335 |
| Riverside      | 913   |
| Orange         | 815   |
| San Diego      | 633   |
| San Bernardino | 616   |

## RACIAL DISTRIBUTION OF CONFIRMED COVID-19 CASES AND DEATHS IN CALIFORNIA

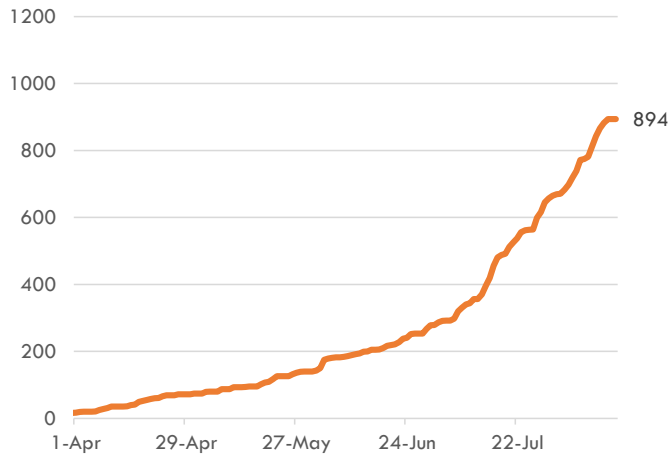

American Indians and Alaska Natives account for 0.5% percent of the population, **0.2% of COVID-19 cases**, and **0.4% of deaths** in California. These include **1,003** cases and **40** deaths among American Indian and Alaska Native people in California.

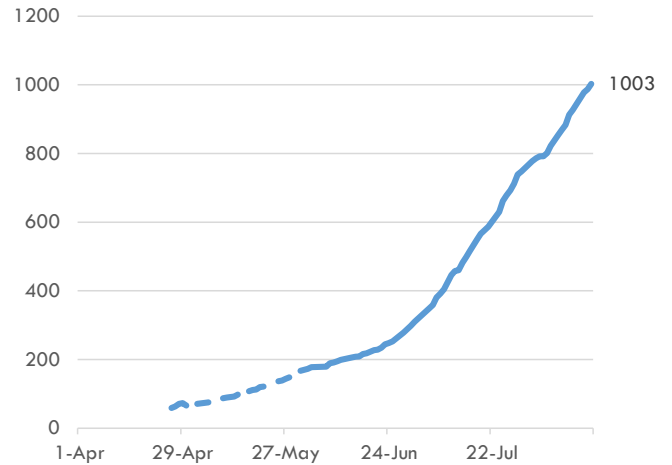

Note: 35% of cases and 1% of deaths are of unknown race/ethnicity. As of 8/19/2020. Source: CDPH

## Two sources for tracking American Indian and Alaska Native (AIAN) cases reported in California

Data from the **Indian Health Service (IHS)** include positive cases reported by Tribal and Urban Indian Health Programs.

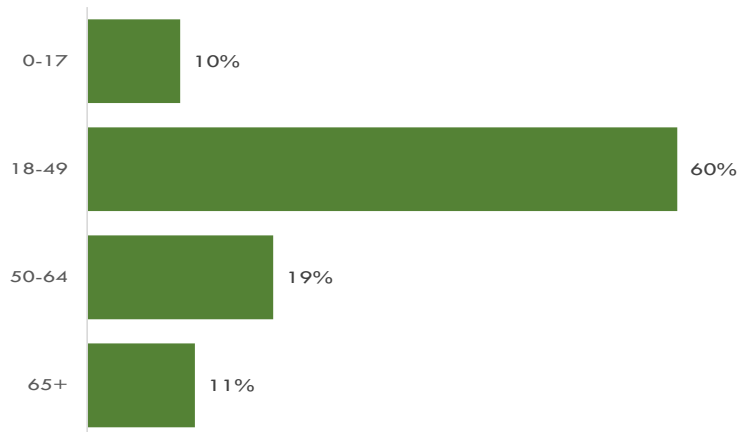

Data from **California Department of Public Health (CDPH)** include all positive cases of AIAN diagnosed in California.

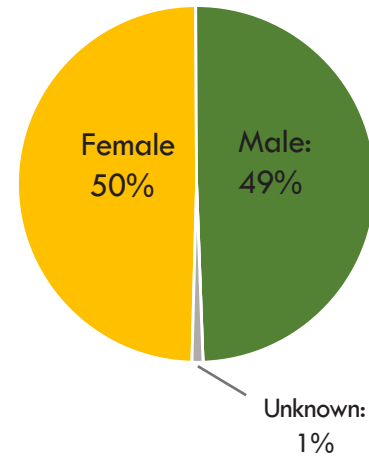

As of 8/18/2020. Source: IHS Data Portal. Note: Gaps in CDPH reported AIAN cases are due to intermittent availability. As of 8/19/2020. Source: CDPH

### Positive Cases by Age Group among all California cases

### Positive Cases by Gender among all California cases

As of 8/19/2020. Source: CDPH

### In California:

**0.8%** of confirmed cases have been admitted to a hospital

**0.3%** of confirmed cases have been admitted to an Intensive Care Unit

**1.8%** of cases have died

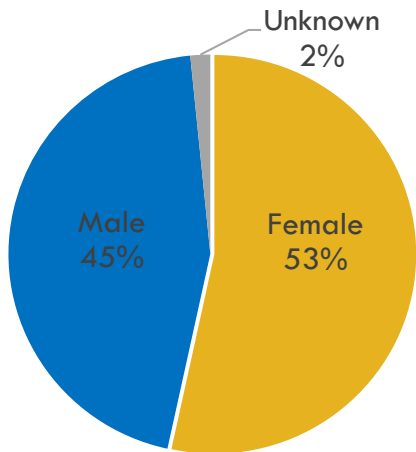

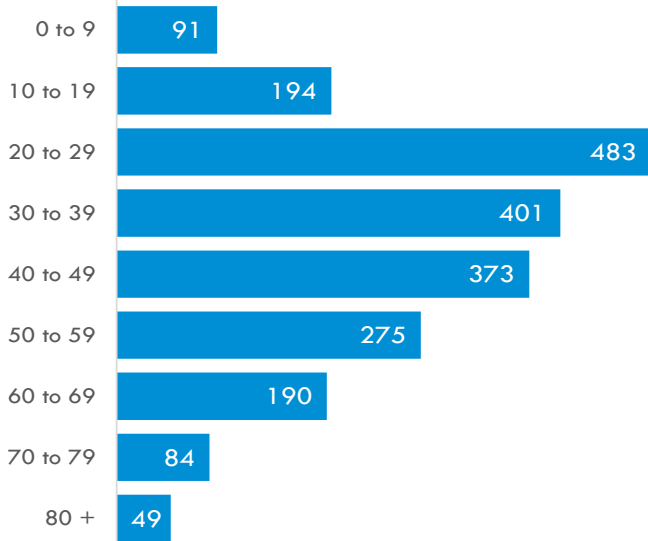

### Case and death disparities:

- For all adults ages 18+, Latinos and African Americans are dying at disproportionately high rates. The proportion of COVID-19 deaths in Latinos is more than 1.5 times their population representation across all adult age categories.
- More males (57%) are dying from COVID-19 than females (43%).
